

DX Software Release Notes | DOMA Technologies

Segment	Feature	Notes
Improved Site/Application Navigation	Caps in forgot login popup	The message in the "Forgot Password" warning popup window utilizes all caps to emphasize a possible lockout
Improved Site/Application Navigation	DIAL: Static Pane	Would let Journal, Save & Complete, Relationship buttons to be anchored
Improved Site/Application Navigation	Login Page Focus	Set focus to username input text entry
Improved Site/Application Navigation	New view for Journal	Allow users to select if they want to view truncated or full messages in the journal grid
Improved Site/Application Navigation	Printing Notification	Will make it obvious that a print job is processing
Improved Site/Application Navigation	Save/Next button	New button in DIA and DIAL allowing users to save and get next document
Improved Site/Application Navigation	Task ordering	Give more control to users in multiple groups about the order of tasks and saved searches
Improved Site/Application Navigation	Re-select left navigation menu options	Allow users to re-select left navigation menu options to quickly and easily return to that menu option.
Improved Site/Application Navigation	Sorting of tasks and saved searches customization	All tasks, qa tasks, and saved searches that a user has permissions for displayed in a list (three different lists, one for each type) where the user can customize the sort order of each list.
Improved Site/Application Navigation	Page up/down	Allow users to page through a document in DIA with page up/down buttons
Improved Site/Application Navigation	DIA: Tab redesign	Tab redesign includes: - Removing outer 'Entity' tabs. Outer tabs will consist only of "Search" and "Documents" - Inner tabs will remain as documents - The entity properties of the document tab will allow the user to select any related entity to edit, to add an existing entity, or to create a new entity - Redesigning the layout of the Document and Entity property tabs to provide maximum real estate for the properties grid.
Enhanced Searching and Reporting Capabilities	Basic Search Doc ID	Ability to search both Entity and Doc ID with Basic Search
Enhanced Searching and Reporting Capabilities	Hover Bubble	Hover over checked out document to see who has it checked out and assigned tasks
Enhanced Searching and Reporting Capabilities	New BEP history tab	This new tab in document/entity audit history will show BEP data
Enhanced Searching and Reporting Capabilities	New Task history tab	Would create a new tab under document/entity audit history for task history
Enhanced Searching and Reporting Capabilities	Search for all checked out documents	New option under Search Options to allow for searching by checked out only. Also, the inclusion of a Check in MOFO button
Enhanced Searching and Reporting Capabilities	Search Options	New section on search results page to hold all search options not related to criteria
Enhanced Searching and Reporting Capabilities	Securing Reporting	Will change the way reports are viewed. Now based on Group roles
Enhanced Searching and Reporting Capabilities	Simple Audit Report	Simplify and combine audit report options
Enhanced Searching and Reporting Capabilities	Workflow Report Admin Page	Allow managers to create workflow reports

DX Software Release Notes | DOMA Technologies

Segment	Feature	Notes
Enhanced Searching and Reporting Capabilities	Show 1st occurrence when text is part of the criteria	This enhancement will show (highlight) the first occurrence of text searched, when the document is viewed (DIA/DIAL) from search results and one or more criteria involves document text.
Enhanced Searching and Reporting Capabilities	Text search sort by relevance	The enhancement will change the default sort to relevancy when searching on document text. Any time a user has document text as part of the search criteria, the default sort should be based on the relevancy of the text used to search. Relevancy is returned by solr for each search and has the potential to be a future static custom field.
Upgraded UI/Application Functionality	DIAL: Multi select thumbnails and rotate	Allow a user to multi select several thumbnail images and rotate them all.
Upgraded UI/Application Functionality	Web upload multiple files	Allow users to upload multiple files on upload with the option to merge the files
Upgraded UI/Application Functionality	Enhanced Get Fields	The existing get fields can support one lookup per type. This enhancement would allow multiple lookup operations on a single document type. A new distinction would be based on the look up field. Instead of having one lookup button, there would be a small button/icon next to the field to be used on the lookup.
Upgraded UI/Application Functionality	Get Fields Lookup for WebUI	This feature would allow users to use the Get Fields option in the Web UI
Upgraded UI/Application Functionality	Add history button in DIA/DIAL	A document history button is now available wherever a document/entity is being worked on
Upgraded UI/Application Functionality	Upload manager add Time	Currently, Upload Manager logs display only Upload Date. New Format: [mm/dd/yyyy] [hh:mm:ss]
Upgraded UI/Application Functionality	User Preference for Split	Add user preference for document split defaults
Upgraded UI/Application Functionality	DIA/SODIA allow multiple instances across sites	This feature will still only allow one instance of DIA/SODIA per a site, but now users can have multiple DIA/SODIA's open if they are each for different sites.
Upgraded UI/Application Functionality	DIA: Legacy and New library options	This enhancement will allow the user (user settings) to choose between to image handler options. The Legacy Image Handling will use the existing PDF rasterizer, which has slow PDF handling. The Enhanced PDF Handling will use the DotPDF to speed up PDF processing.
Upgraded UI/Application Functionality	DIA: Print selection only	The ability to select certain pages of a document in DIA then hit Print>Selection Only and print only the selected pages.
Upgraded UI/Application Functionality	BEP: Merge MOFO	This enhancement allows the user to select multiple documents (MOFO), and merge them into one document in a designated order.
Elevated Security Features	eDOMAAdmin Group	Only users with a DOMA password can be members of the eDOMA group
Elevated Security Features	Google Two-factor Authentication	Add Google Two-factor Authentication and PIV card as alternative login options
Elevated Security Features	Login Attempt Warning	Warn users in explicit ways that they are about to lock their accounts
Elevated Security Features	Save/Next group role	Would make the save/next button a group role
Elevated Security Features	User Unlock/Reset separate rights	This feature would allow a user to have access (new role) to reset a user's password and/or unlock a user's account, without allowing edit access to other user information
Elevated Security Features	Force 2FA	If a user is in a group with 2FA assigned, then the user must complete the configuration of the 2FA before getting into the site. This will prevent users without a configured 2FA in the site, but allowing them to configure their own 2FA.

DX Software Release Notes | DOMA Technologies

Segment	Feature	Notes
Elevated Security Features	Separate Permission tab for System Custom Fields	This feature would create a new tab called 'System Fields' right next to the Custom Fields tab and would contain all the static fields. These static fields would no longer be listed under the custom fields tab in Group Permissions
