

SOFTWARE AS A SERVICE OFFERINGS

Software as a Service (SaaS) offerings allow your organization to keep pace with a rapidly evolving technology landscape.

DOMA Technologies' in-house development team can help you realize a more efficient workflow with custom SaaS applications. With a SaaS solution our team does all of the technical work and cloud infrastructure maintenance, putting you on the fast track to success.

Accessible Anywhere

Workflow Integration

Easily Scalable

SIMPLICITY THROUGH SaaS:

DOMA's development team can create a custom application to meet your needs and host it within the Cloud. Our team can empower your team with applications that include advanced reporting, business intelligence, data visualization, and more. We do all the heavy lifting and application management, minimizing the learning curve and time investment required by your team.

INTELLIGENT AUTOMATION:

Our development team can integrate the latest technology and tools into your cloud application. This includes robotic process automation (RPA), intelligent character recognition (ICR) and a wide range of artificial intelligence (AI) and machine learning (ML) micro-services.

EASILY INTEGRATE WITH YOUR CURRENT APPLICATIONS :

We deploy APIs to harmonize your entire digital infrastructure. Integrating a new SaaS application can be tricky, but our expertise with REST APIs means our applications will communicate with the tools you're already using. This makes the on-boarding process more seamless for your team.

DOMA's Software Changes the Way you Interact with Information

In addition to custom development, we offer a turnkey solution for data and document management. DOMA's DX Software platform is a secure document repository that gives you deeper access to your documents, automates processes, and more.

ADDITIONAL SERVICES

We are always expanding our catalog of offerings and our internal skill set. In 2022 we will be further exploring Fast Healthcare Interoperability Resources (FHIR) API.

BENEFITS OF A SaaS APPROACH

- Minimal IT Investment for Your Team
- Easily Scalable to Meet Demand
- Cost Effective - Upfront and Long-Term
- Highly Accessible via the Cloud
- Increased Security
- Improved Data Visibility & Insight
